Use a 30% slimmer jaw profile for precise dissection, grasp with the textured surface to secure tissue, then approach anatomy from the angle you prefer by articulating the wrist.

With the instrument in position, an electrode that is 3 mm longer helps you confidently seal and cut vessels up to 7 mm in diameter or tissue bundles that fit in the jaws.  

### 01 30% slimmer jaw profile for optimized dissection and tissue manipulation.

### 02 Multi-functional instrument with the ability to seal, cut, grasp and dissect.

### 03 Electrode extended to the tip of the instrument for enhanced vascular access.

**Powered by Erbe VIO® Technology**

The Erbe VIO dV® generators power da Vinci Vessel Sealer Extend by dynamically adjusting power and stopping the flow of energy automatically when the seal is complete.

---

IMPORTANT SAFETY INFORMATION

Serious complications may occur in any surgery, including da Vinci® Surgery, up to and including death. Examples of serious or life-threatening complications, which may require prolonged and/or unexpected hospitalization and/or reoperation, include but are not limited to, one or more of the following: injury to tissues/organs, bleeding, infection and internal scarring that can cause long-lasting dysfunction/pain.

Risks specific to minimally invasive surgery, including da Vinci® Surgery, include but are not limited to, one or more of the following: temporary pain/nerve injury associated with positioning, a longer operative time, the need to convert to an open approach, or the need for additional or larger incision sites. Converting the procedure could result in a longer operative time, a longer time under anesthesia, and could lead to increased complications. Contraindications applicable to the use of conventional endoscopic instruments also apply to the use of all da Vinci instruments.

Individual surgical results may vary.

The EndoWrist® Vessel Sealer Extend is a bipolar electrosurgical instrument for use with a compatible da Vinci surgical system and the ERBE VIO dV® electrosurgical generator. It is intended for grasping and blunt dissection of tissue and for bipolar coagulation and mechanical transection of vessels up to 7 mm in diameter and tissue bundles that fit in the jaws of the instrument. The EndoWrist Vessel Sealer Extend has not been shown to be effective for tubal sterilization or tubal coagulation for sterilization procedures, and should not be used for these procedures.
